automatically open when pressures reach unsafe levels.

## **The Pembletons: The Ottoman Deception**

An experiment performed in [39] [40] produced results that demonstrated that information could be obtained regarding which path a particle had taken without destroying the interference altogether.

## **Frigate Commander**

The detailed study of modern dialects has shown that clear boundaries between one dialect and the next rarely exist. Usually a whole series of links can be found between any two dialects, so that each dialect is in some sense a transitional term between its neighbours on each side, sharing some of the peculiarities of each. This is summed up in the so-called Wave Theory of Johannes Schmidt according to which individual points of difference arise at various points in a linguistic area and spread over a certain region, their boundaries intersecting the boundaries of other changes similarly spreading from other centres.
